DETAILED ACTION

Status of Claims

Claims 1-20 are pending in this application. Claims 1, 2, 7, 12 and 16 are amended. Claim 17 is cancelled. Claims 1-16 and 18-20 are pending.

Response to Arguments

1. Applicant's arguments, filed 12/01/2011 with respect to claims 1-20 have been fully considered and are persuasive. The claim objections, 101, 112 and 103 rejections are withdrawn.

Allowable Subject Matter

Claims 1-16 and 18-20 are allowed.

The following is an examiner's statement of reasons for allowance: The examiner finds that the prior art does not disclose the limitations of the independent claims either alone or in combination.

Exemplary claim 1 recites:

A software system digitally encoded in at least one non-transitory machine readable medium configured to be usable by at least one machine for use in providing a web service interface for a billing service, wherein a plurality of billing functions is provided by said billing service to computing applications residing on one or more computing

devices in a distributed network, the software system comprising:

a. a web service interface, which is implemented within software stored on a non-transitory computer readable medium, defined for a billing service, said web service interface being adapted for coupling to a billing engine, said billing engine residing on a computing device in said distributed network and being adapted to perform said plurality of billing functions, said web service interface comprises a plurality of application programming interfaces, each of said application programming interfaces being associated with one of said billing functions and being implemented such that the billing function associated therewith is performed after a web service invocation that commands performance of said billing function is received by said web service interface; and

b. a plurality of object classes which are implemented within software stored on a non-transitory computer readable medium, each of said object classes defining objects for storing data utilized by said billing engine and for communicating said data to said billing engine through at least one implemented application programming interface of said web service interface,

said web service interface being used to provide said billing service as a web service that is configured to be invoked by said computing applications in said distributed network.

The closest Prior art is Stelting which discloses a method and system for combining and offering web services however, Stelting does not disclose a web service interface adapted to perform a plurality of billing functions each associated with an application programming interface and a plurality of object classes defining objects for storing data utilized by said billing engine and for communicating said data to said billing engine through the application programming interface.

Stelting does not offer details concerning the operation of the billing service offered and does not disclose the use of object classes in the operation of the billing engine.

Bowman-Amuah discloses object-oriented programming as a process of developing computer software using objects; an object is a software package that contains both data and a collection of related structures and procedures; each object is

responsible for a particular task (Col. 10, lines 44-55); an object is a single instance of the class of objects (col. 10, line 67 - Col. 11, line 1); the benefits of object classes where objects and their corresponding classes break down complex programming problems into smaller, simpler problems; the organization of data into small, independent objects that can communicate with each other; subclassing and inheritance make it possible to extend and modify objects through deriving new kinds of objects from the standard classes available, thus new capabilities are created without having to start from scratch. Polymorphism and multiple inheritance make it possible to for different programmers to mix and match characteristics of many different classes and create specialized objects that can still work with related objects in predictable ways (Col. 12, lines 37-59).

Bowman-Amuah also discloses Web Services that enable organizations to deploy Netcentric applications over the internet (Col. 106, lines 59-62); component technologies are a natural evolution from object-oriented systems providing a more mature way of packaging reusable software units (col. 123, lines 34-37); users are asking for assistance to deploy netcentric ecommerce applications based on components (Col. 123, lines 54-55); business components represent real-world concepts in the business domain including billing (Col. 126, lines 32-37).

Nguyen discloses business relying on asp applications such as a billing system (Para. 0017). The billing system may facilitate, new subscriber registration, customer care, user provisioning and bill presentment.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).
